2006 Blueberry Statistics

New Jersey Agricultural Statistics Service

a field office of the
National Agricultural Statistics Service
United States Department of Agriculture
in cooperation with the New Jersey Department of Agriculture

Who we are

The mission of USDA's National Agricultural Statistics Service (NASS) is to provide timely, accurate, and useful statistics in service to United States agriculture. All 46 field offices are operated under cooperative funding arrangements with State Departments of Agriculture and/or land-grant universities. Statistics are based on data collected from growers and agribusinesses through annual, quarterly, monthly, and weekly surveys and the Census of Agriculture.

Nationwide: About 400 national reports are issued annually covering about 120 crop and 45 livestock items in the major-producing states along with economic and demographic information. Each report is published according to a pre-set calendar of release dates. Strict security ensures that no one gains premature access to the information. The Census of Agriculture is conducted every five years to generate statistics for ALL agricultural commodities at the county, state, and national levels. The five-year program also includes special studies like the Census of Horticulture and Aquaculture. Census products and services are available from all field offices.

New Jersey: The New Jersey field office issues about 65 reports annually such as the *New Jersey Farm Facts, Weekly Crop Weather Report, Jersey Fresh Fruit and Vegetable Crops,* and an annual summary with historical comparisons and county statistics for our major commodities.

2006 BLUEBERRY STATISTICS

New Jersey ranked second in the nation in the production of cultivated blueberries in 2006. Michigan was ranked first. The total value of the 2006 blueberry crop in New Jersey was \$83.7 million, the highest amount on record. Utilized production, at 52.0 million pounds, increased 16 percent from 2005. The overall season average price was \$1.61 per pound, a new record high price in New Jersey. The average fresh market price was \$1.64 per pound, while the processing price was \$1.51 per pound. The processing price per pound was 49 cents above the 2005 price level of \$1.02 per pound.

The area harvested, at 7,600 acres, increased 100 acres from the previous two years. The state average yield per acre was 6,840 pounds per acre compared to 6,000 pounds in 2005 and 5,200 pounds per acre in 2004.

Atlantic and Burlington Counties accounted for 96 percent of the area harvested and 99 percent of New Jersey's utilized production. The top blueberry producing county in New Jersey was Atlantic County, with 6,100 acres harvested and an average yield of 7,360 pounds per acre. Utilized production for Atlantic County was 44.9 million pounds. Burlington County producers harvested 1,200 acres with an average yield of 5,420 pounds per acre and utilized production of 6.5 million pounds.

We ensure the confidentiality of all individual reports. No person (outside of Agricultural Statistics Service personnel), organization, or other local, state, or federal government agency has access to any report an individual submits to us. Individual reports are used only in combination with other reports and are summarized to develop county, state, and national blueberry production estimates.

The publication and dissemination of agricultural statistics are possible only through the support and cooperation of the New Jersey Department of Agriculture and the agricultural industry. The New Jersey Agricultural Statistics Service would like to thank those producers who responded to our surveys and furnished information for the Blueberry Program.
